DETAILED ACTION

Claim Rejections - 35 U.S.C. § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Feleming et al.(WO 97/13334) in view of Huang et al.(IEEE).

With regards to claims 1, 12 Fleming teaches a system for controlling call admissions in a communications network, comprising:

load calculating means for calculating a load level(Fleming, abstract lines 5-6), control means for controlling call admission based on the calculated load level.(Fleming, abstract lines 7-10). What Fleming fails to teach is the calculation of the load level as a function of a change in power measurement or change in the number of users(Huang teaches the calculation of a load level as a function of the number of users, p. 1666, under III CDMA Cell Load Measurement, it is clear from the formula...(8), that the cell load is a function of number of users). It would have been obvious to one of ordinary skill in the art to calculate the load level as a function of the number of users as taught in Huang, because in CDMA because each user acts as an interference source hence adding more users may create more interference that may lead to call dropping.

Art Unit: 2661

Hence it would have been obvious to combine Huang with Fleming for the purpose of controlling cal admissions

Allowable Subject Matter

3. Claims 2-11, 13-23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
